

Net-Zero Emissions for Investments of Munich Re ***Is it possible?***

Global Change Management – Strategies for Change and transformation – Group 2

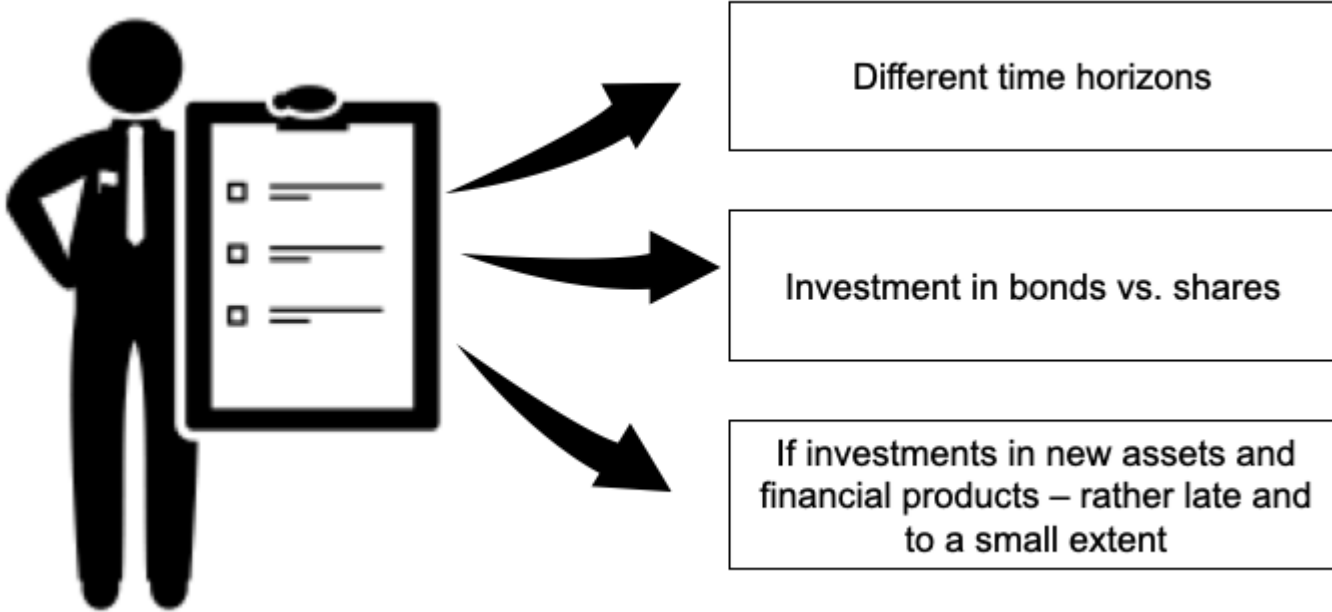

Anna Welke, Minraj Arif, Segen Mebrahtu

**WHY IS IT DIFFICULT FOR AN INSURANCE COMPANY
TO REACH NET-ZERO EMISSIONS BY 2050?**

**WHAT ARE IMPORTANT FACTORS INFLUENCING THIS
TRANSITION?**

RULES & REGULATIONS for insurance sector

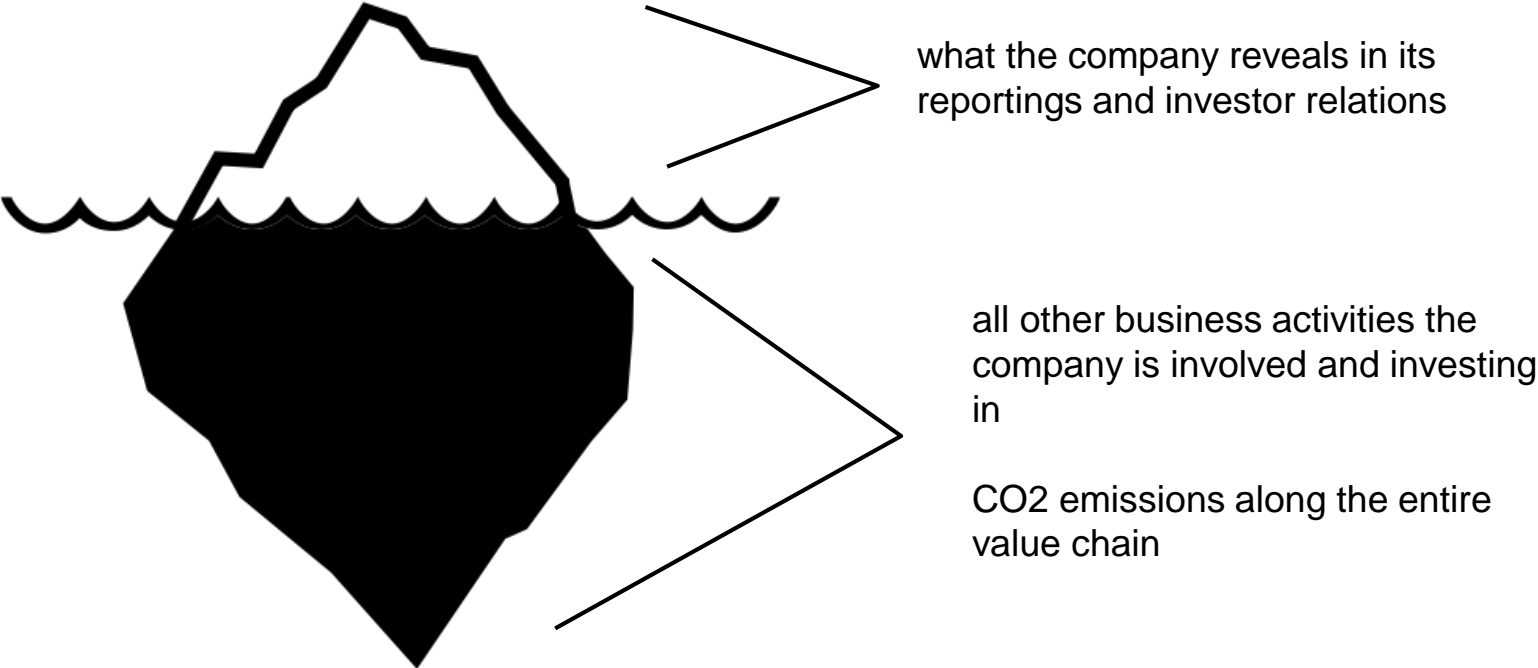

CUSTOMER EXPECTATIONS

- customers expect a certain return on their premium for e.g. life insurances
- fixed returns on certain products

⇒ need for stable ROIs

IN TRANSPARENCY & DATA AVAILABILITY

NO REPORTING STANDARDS

The screenshot shows the top part of a website. At the top left is the European Commission logo. To its right is the text 'BANKING AND FINANCE'. Below this is a blue navigation bar with the text 'European Commission > Banking and finance > Company reporting > Non-Financial Reporting'. Below the navigation bar is a 'Home' link. On the left is a sidebar menu with 'Company Reporting' as a main heading, and sub-items: 'IFRS financial statements', 'Non-IFRS financial statements', 'Non-Financial Reporting' (highlighted), 'Public Country-By-Country Reporting / Corporate tax transparency', 'Reporting by undertakings with listed securities', and 'Legal framework / ...'. The main content area has the heading 'Non-Financial Reporting' and contains the following text: 'Financial and non-financial reporting provides shareholders and other stakeholders with a meaningful, comprehensive view of the position and performance of companies. Large public-interest entities (listed companies, banks, insurance undertakings and other companies that are so designated by Member States) with more than 500 employees should disclose in their management report relevant and useful information on their policies, main risks and outcomes relating to at least' followed by a bulleted list: 'environmental matters, social and employee aspects, respect for human rights, anticorruption and bribery issues, and diversity in their board of directors.'

- EU Non-Financial Reporting Directive
- SMEs left out
- no standards on the contents of CSR reporting

AVAILABILITY OF GREEN BONDS

Market is increasing

BUT:

- green bonds are not all the same
- no conformity on the definition of green bonds
- data availability on projects directly funded through the issuing of bonds → usually not revealed

ARE THERE BEST PRACTICE EXAMPLES

HOW THIS CAN WORK?

- Doubled its green investment
- invested in transition bonds – complementing green bonds
- launches FastCat → new parametric assistance service (weather alert)
- gradually exiting coal industry → strengthened its coal connected policy
- joined Net Zero Asset Owner Alliance (Munich Re is a member)
- AXA is also joining forces with the C40 network

- switched to ESG benchmarks
- divested from companies with an exposure < 30% to thermal coal in 2016; 2019 added absolute thresholds for mining companies and power utility generators.
- has achieved a 50% average carbon intensity reduction in its investment portfolio across credits and listed equities since the end of 2015.
- has increased its green, social and sustainable bond target from USD 1.5 billion to at least USD 4 billion by 2024.

FRONT RUNNERS

- Environmental Business Initiative:
 - invest additional \$300 billion by 2030 in sustainable energy and transportation, climate resiliency and clean water → low-carbon, sustainable economy and enable it to deliver long-term value
- Santander:
 - aims to facilitate €220 billion → Sustainable Development Goals by 2030 → green finance tackling climate change
- UBS Group AG
 - developed product to identify the carbon intensity of investments → reducing exposure to, rather than excluding, companies with higher carbon risk → strategic engagement with these companies

INVESTMENT STRATEGY FOCUSING ON

INVESTMENT OPPORTUNITIES

TO SUPPORT THE TRANSITION TO A LOW-CARBON

ECONOMY

COMPANIES SHIFTING TO GREENER BUSINESS MODELS

INNOVATIVE COMPANIES

IMPOSSIBLE™

NATURAL RESOURCES

DIGITALISATION AS A TRANSITION FACILITATOR

- technological innovations can harm our environment → rebound effects
- Green or clean digital technology investment has potential to indirectly influence a lowering of your carbon Footprint
- green technology continues to emerge as a growing force with innovation trends
- *Example:*
 - use of mobile technologies → **machine-to-machine** (M2M) and **internet of things** (IoT): global reduction in GHG emissions > 2 billion tonnes last year (2019).
 - Salesforce: created carbon accounting product to help customers based on climate-related data.

ECOSYSTEMS INITIATIVES

- can help overcome economic and other structural barriers by fostering sectoral collaboration
- enabling willing actors to overcome restrictions on individual companies and agree on risk-sharing mechanisms → create the competitive level playing field necessary for companies to act
- such ecosystems can help accelerate the speed and scale of change.

Companies working with governments to unlock finance for natural climate solutions in new & existing markets

ECOSYSTEMS INITIATIVES

RE100: has been instrumental in pushing commitments to 100% renewable energy among leading companies

The image shows a screenshot of the RE100 website and a Twitter post. The website header includes the RE100 logo, navigation links for 'ABOUT RE100', 'PARTNERS', and 'GOING 100%', social media icons for Twitter, Email, and LinkedIn, and a 'JOIN NOW' button. The main content area features a 'Companies' section with the text: '230 RE100 companies have made a commitment to go '100% renewable'. Read about the actions they are taking and why.' Below this, the logos for INGKA and IKEA are displayed, with the text 'IKEA Retail business' underneath. A paragraph of text describes Ingka Group's commitment to 100% renewable electricity by 2025. To the right, a 'Latest from Twitter' section shows a tweet from RE100 (@theRE100) announcing that Sumitomo Forestry Group has joined #RE100. The tweet text reads: 'Sumitomo Forestry Group, the leading custom-built wooden house company in Japan, has joined #RE100 - another Japanese business taking action on clean energy. They aim to achieve 100% renewable electricity across their operations by 2040: there100.org/companies @ClimateGroup @CDP'. The tweet includes the Japanese text '木と生きる幸福' and the company name '住友林業' (Sumitomo Forestry). An arrow points from the tweet on the website to a larger, detailed view of the same tweet on the right.

230 RE100 companies have made a commitment to go '100% renewable'. Read about the actions they are taking and why.

INGKA™ | **IKEA**
IKEA Retail business

Ingka Group (formerly IKEA Group) operates three business areas: IKEA Retail, Ingka Investments and Ingka Centres. Ingka Group operates 367 IKEA stores in 30 countries, as well as shopping centres and increasingly city-centre customer meeting points. The company has committed to generate as much renewable energy as the total energy it consumes in its operations by 2020; as well as to consume 100% renewable electricity by 2025. Alongside Swiss Re, Ingka Group is a founding partner of

**WHAT CAN POLITICS DO TO ENFORCE THIS SHIFT OF
INVESTMENT?**

Green investment can be scaled up to deliver sustained global growth

The first Green Investment report synthesizes, and draws out key implications and recommendations from the best available research on green investment from Alliance members and other leading institutions. Based on current analysis on global green investment flows and the amounts needed to address climate and other environmental challenges, and given the growing base of experience in targeting public funds and policies to attract private investment in green growth, there are four recommendations for government, business and public finance leaders.

Greening investment, and thereby the economy, is the only option: carbon and resource-intensive growth is simply not a viable growth pathway

This first message is a broadcast to political, business, labor and civil society leaders and the general public. Economic growth cannot be sustained without dramatic increases in natural resource productivity and reductions in carbon emissions. As a result of the clear evidence of negative climate change impacts today, and the potentially devastating impacts in the future, greening investment is a precondition for a stable, vibrant and inclusive global economy. Building from the 2012 G20 Summit, G20 leaders should reaffirm that greening the economy is the only route to sustained growth and development.

Transitioning to a green growth pathway is achievable at low cost

To accelerate and guide the green growth transformation, governments, investors and international organizations must improve global tracking, analysis and promotion of green investment.

Effective policy pathways and the efficient deployment of public finance to green investment is well understood, tried and tested, and must now be scaled up

There is a need to reinforce the collective political will to advance public policies to incentivize green investment and economic growth, including:

- Accelerating the implementation of the G20 commitment to phase out fossil-fuel subsidies, and bringing into force fiscal and other instruments that establish robust carbon prices.
- enabling greater free trade in green technologies, including those developed with commercial and public finance, through initiatives such as those adopted by APEC (Asia-Pacific Economic Cooperation) leaders
- Integrating the adaptation agenda into green investment by supporting initiatives that promote the scaled-up deployment of clean energy, water and agriculture across poorer communities, as exemplified by the United Nations Sustainable Energy for All Initiative.

G20 governments and emerging economies can demonstrate leadership by:

- Encouraging development finance institutions to accelerate and rationalize the broad adoption and scale-up of tried and tested public financing instruments.
- Engaging private investors directly in debate, co-design and wider dissemination of experience of relevant co-financing mechanisms.

Investors should seize the green investment opportunity by calibrating risk-return analysis to the current climate in pursuit of long-term returns

- The recommendations above will be advanced through the Green Growth Action Alliance

The Green Growth Action Alliance: combining public and private expertise to scale up investment for green growth.

The Green Growth Action Alliance is supporting the scale-up in green growth through the collaboration of more than 50 leading financial institutions, corporations, governments and non-governmental organizations.

Some examples of initiatives and working groups trying to achieve these goals are:

- Development and testing of new financing tools
- Promotion of green free trade
- Promotion of large-scale renewable-energy purchases by corporations
- Energy efficiency financing
- Climate-smart agriculture financing
- Innovative finance models

EU Commission action plan on sustainable finance

In March 2018, the European Commission adopted an action plan on sustainable finance as part of a strategy to integrate environmental, social and governance considerations into its financial policy framework and mobilize finance for sustainable growth. In May 2018, the Commission released the first legislative package under the action plan.

The four proposals included in the package are:

- (1) A unified EU classification system ('taxonomy')
- (2) Investors' duties and disclosures
- (3) low-carbon benchmarks
- (4) Better advice to clients on sustainability

Germany's Climate Action Law

General purpose of the law:

- Guarantee Germany fulfils national and European climate targets “to safeguard against the effects of global climate change”
- Law “rests upon” Paris Agreement target to limit global warming to well below 2°C and possibly to 1.5°C, plus the commitment Germany made at the UN climate action summit in New York on 23 September 2019 to “*pursue*” the long-term target of greenhouse gas neutrality by 2050.
